**YOUR "YES"
WMS.**

IT'S A TREMENDOUS TIME TO BE A 3PL PROVIDER

In a stretch of years where many industries have faced slowdowns, 3PLs have enjoyed steady growth. Online retail is surging, and if you're a 3PL with the right capabilities and ample capacity, the future is yours.

But with growth comes complexity. Each new customer arrives with a full bag of customized wants, needs, and fulfillment preferences. Each new shopping season brings new labor challenges, compounded by a persistent labor shortage. As distribution becomes the cornerstone of the brand experience, 3PL providers are asked to shoulder bigger challenges and measured to higher standards.

If a 3PL provider cannot get its arms around operational complexity, the result will be workflow bottlenecks, tedious and time-consuming onboarding, cloudy financial visibility, and a host of other business limitations. It will not be able to respond fast enough and strategically enough to satisfy customer demands. And all that future growth will be unattainable.

The key to success is technology. A strategic investment in the right logistics technology is how the smartest warehouses are run, the toughest operational challenges are solved, the most profitable businesses are built, and the best brand experiences are delivered.

3PL providers who embrace technology innovation will rule the market. They will thrive where logistics requirements are the most complex and where their capabilities delivers the most value.

DOES YOUR BUSINESS HAVE ANY OF THESE CHALLENGES?

- Revenue Leakage/Insufficient Billing Capabilities
- Lack of Flexibility and Scalability
- Inability to Meet Industry Standards
- Lack of Visibility and Tracking
- Cost Management
- Risk Management
- Inventory Management
- Insufficient Support for Integrations and New Technologies
- Inability to handle multi-client single tenant deployments
- Inability to Meet Customer Expectations

YES, OUR WMS CAN PROVIDE YOU WITH

- Unmatched flexibility: Tailor processes, branding, reports, and more to match your needs and that of your customers.
- A streamlined, user-centric user interface for increased productivity
- Configurable, innovative technology that can help your business adapt, thrive, and grow

INBOUND OPERATIONS

Execution

- Shipment Scheduling
- Quality Audit
- Inbound Sortation
- Yard Management
- Cross Docking
- Vendor/Carrier Performance
- Receiving
- Flow-Through
- Returns

Inventory Management

- Putaway
- Cycle Count
- Serial # Tracking
- Lot Management
- Physical Count
- Warehouse Transfers
- Inventory Consolidation
- Work Orders
- Inventory Control

Billing

- In/Outbound Handling
- Volume/Weight Billing
- Accessorial Charges
- Owner Specific Billing
- Recurring Storage
- Work Order Billing
- Anniversary Storage
- Auto Invoice Generation

OUTBOUND OPERATIONS

Planning

- Wave Management
- Replenishment
- Constraint Fulfillment
- Dynamic Pick Locations
- Inventory Allocation
- Sortation Scheduling
- Order Consolidation
- Cartonization
- Scale Tickets

Fulfillment

- Pick/Pack
- Value Added Services
- Put to Store
- Multi-Channel Fulfillment
- Quality Audit
- Item Substitution
- Shipment Scheduling
- Pack and Hold

Datex Mobile Web

- Device Independent
- Easy to use, feature rich
- Browser-based for mobile users
- Quick connect
- Compatible with most devices
- Facilitates real time operations and visibility
- Self-adjusting portrait or landscape orientation
- Intuitive interface minimizes training time

Customer Portal

- Easy-to-use self-serve portal
- Enables 3PL customers to manage operations in real time
- Tailorable for any brand or customer
- 24/7 access to real time enterprise data and operations
- Robust secured access

YOUR “YES” WMS.

With Datex Footprint WMS, intricate tasks become straightforward, enabling you to say “YES” to more

ACCELERATES ONBOARDING AND TIME TO REVENUE:

Accelerates Onboarding and Time to Revenue: Our advanced capabilities enable faster onboarding of both customers and associates, which accelerates your revenue generation.

CAPTURE EVERY BILLABLE ACTIVITY:

Our flexible billing engine guarantees accurate billing for even the most unique circumstance and eliminates underbilling concerns, ensuring your money won’t get lost in the complexity of your operations.

SEAMLESSLY INTEGRATES WITH THIRD-PARTY SOLUTIONS:

Empower your team with low-code options for custom integrations and access our extensive library of pre-built and native integrations. Datex FootPrint Cloud ensures that you stay seamlessly connected to the digital world and opens up new markets and alternative fulfillment capabilities.

TRANSFORMS THE USER EXPERIENCE:

Experience a role-driven user interface that is perfectly tailored to every customer requirement, and easily updated every time a single requirement changes. You can boost productivity and throughput at every step, while minimizing errors and wasted time.

GAIN TOTAL VISIBILITY AND PROACTIVELY SOLVE PROBLEMS:

Gain a single source of truth with unified visibility across the entire transaction lifecycle that captures every aspect of your operations.

Our platform brings critical real-time information front and center and leverages predictive analytics, so you gain the power to preemptively solve problems and deliver top-notch customer service.

Say "YES" to More Flexibility, Reduction in Operating Cost, and Burden on Your IT Team

Introducing Datex Footprint® WMS, powered by Wavelength

Datex FootPrint WMS is a SaaS warehouse management system designed for visionary 3PL companies with complex customer demands and ambitious growth plans who see technology as a strategic differentiator to achieving exponential revenue growth and unparalleled efficiency.

- Premier SaaS application hosted on Microsoft Azure
- Fully integrated, composed, published and managed within our Wavelength platform
- Inability to Meet Industry Standards
- Intuitive drag-and-drop simplicity
- Zero downtime update capabilities
- Tenant isolation
- Empowers clients to swiftly deploy customized enterprise solutions to meet complex operational needs
- Hosted on Microsoft Azure environment
- Industry-based validations
- Native customized mobile solution
- Easily scalable for growth

Access easily from any location

Readily available

Vendor maintains the environment

Enhanced security

Vendor provides upgrades to hardware

Ready access to real time data

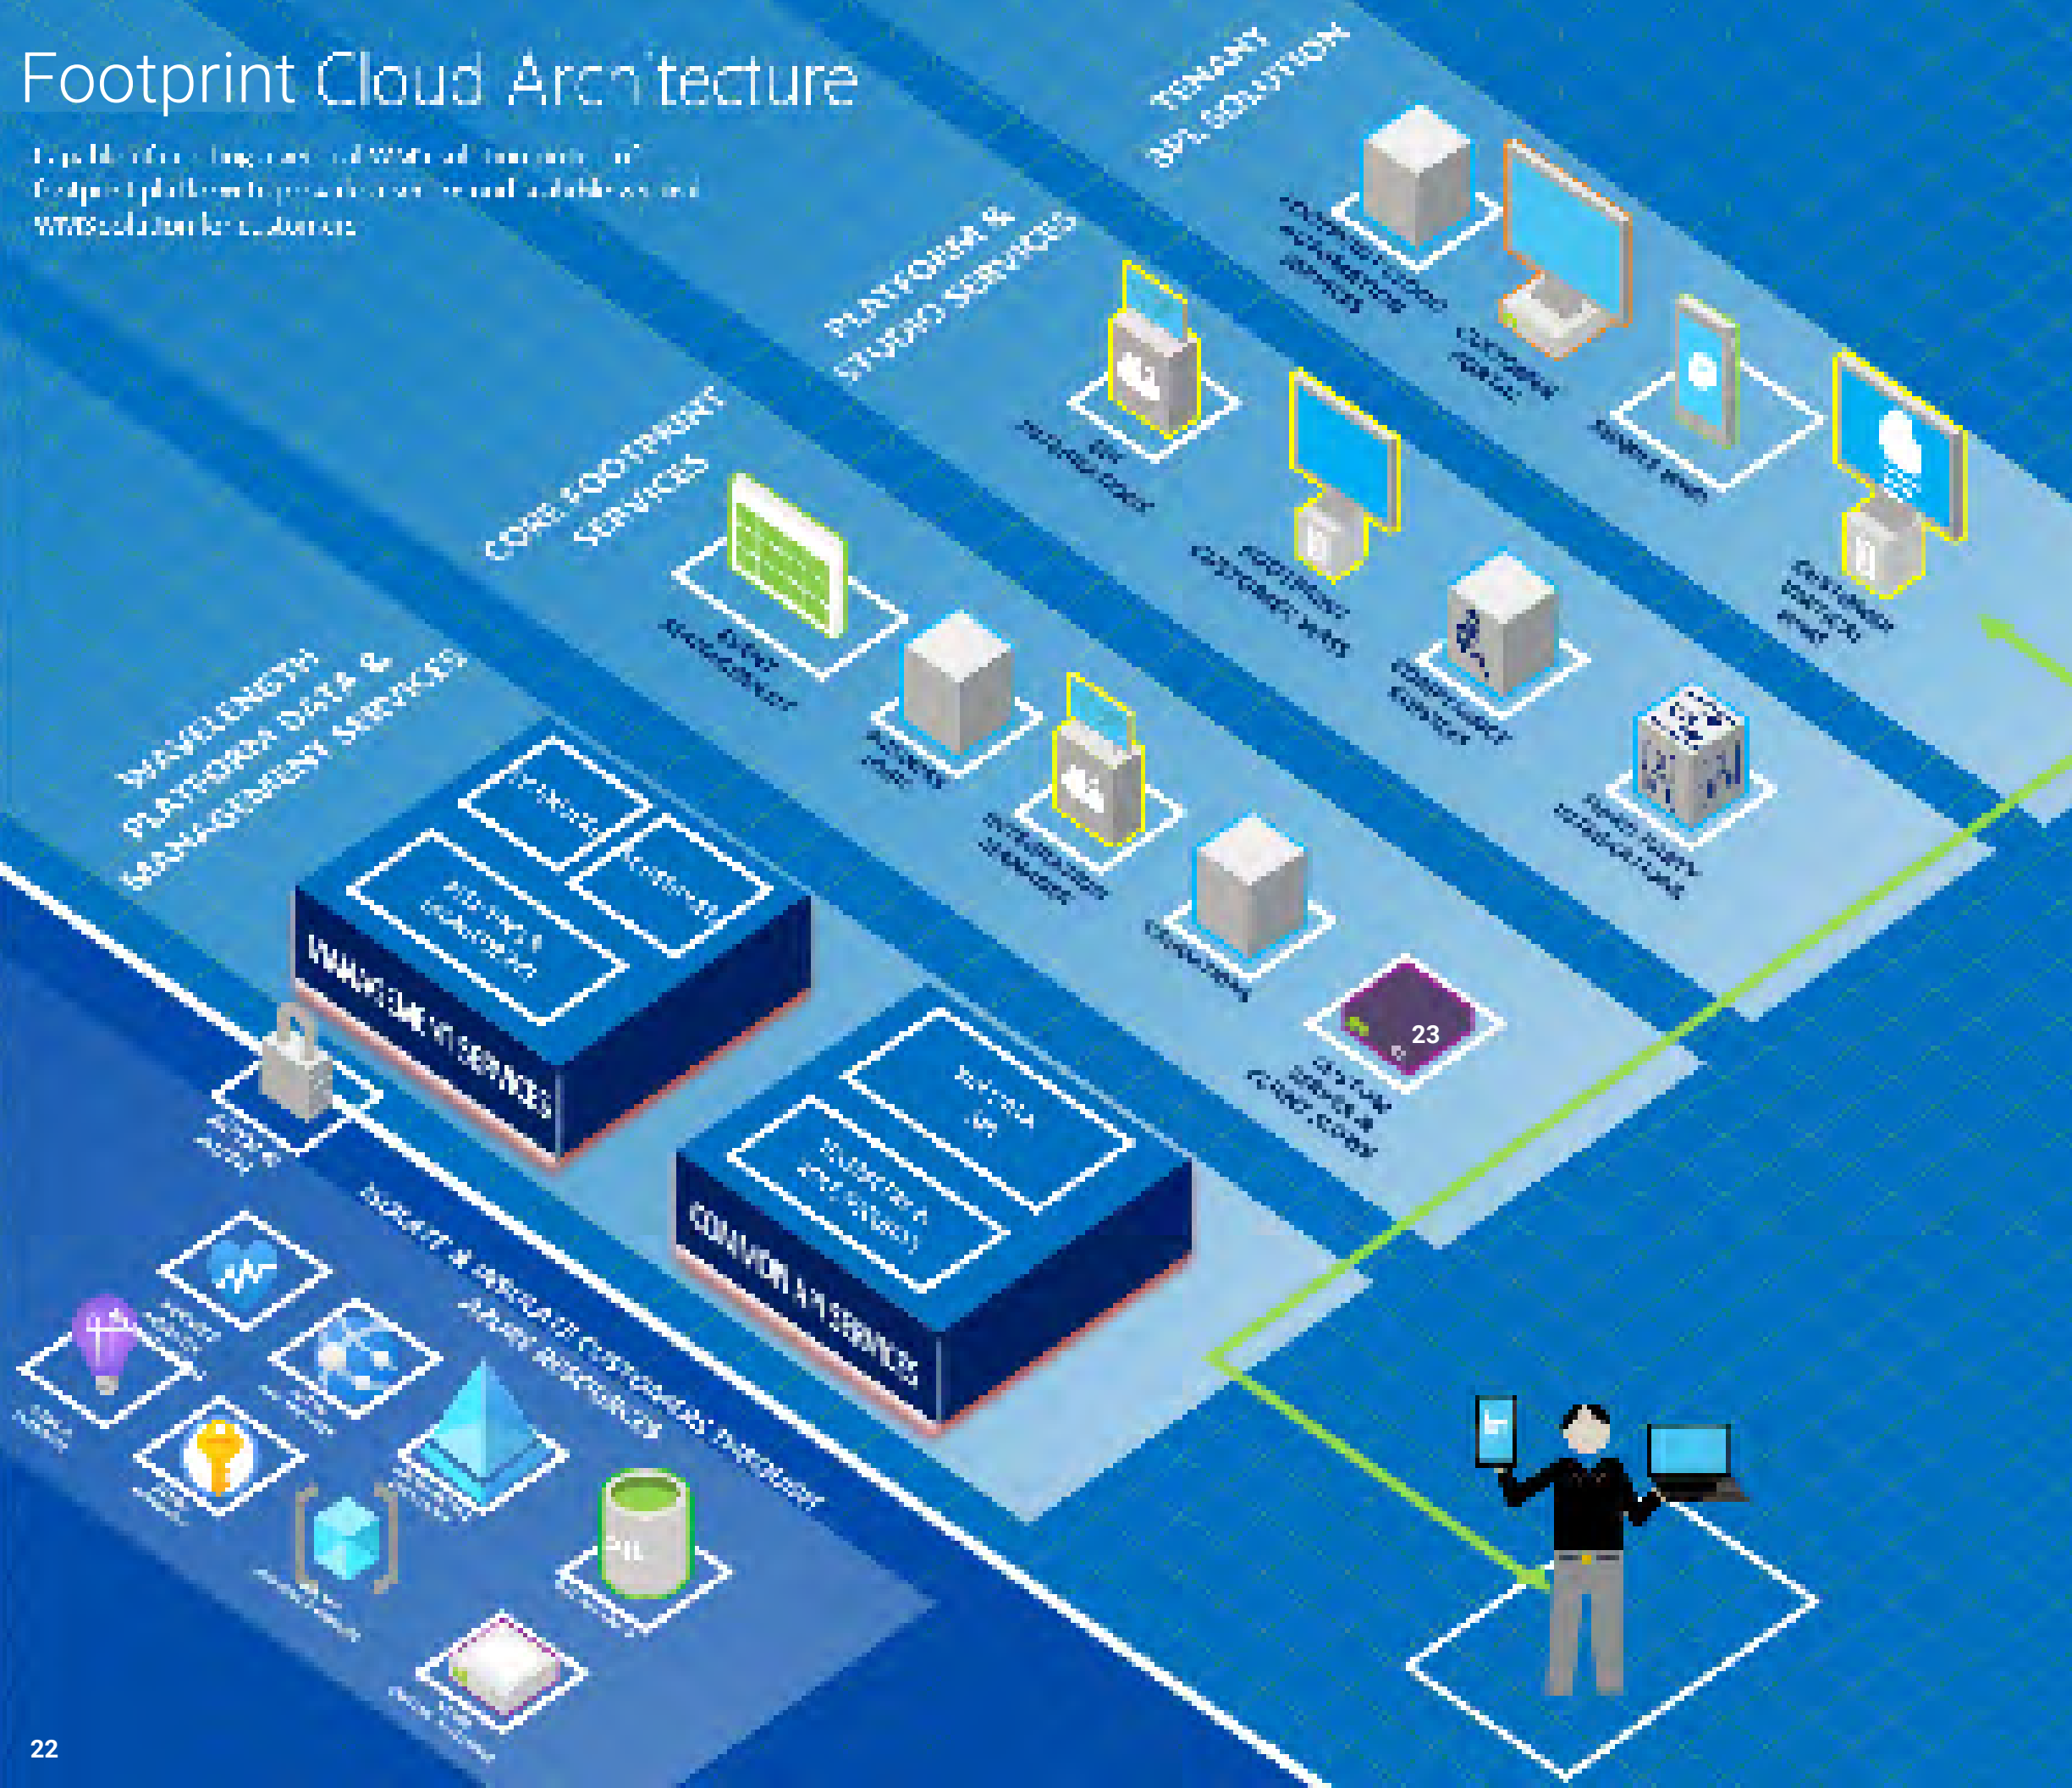

2

**INNOVATIVE
NEW DATEX
TECHNOLOGY
FOR 3PLS**

Footprint Cloud Architecture

Capable of integrating all WMS and Transportation
Footprint platform to provide a seamless and available end-to-end
WMS solution for customers

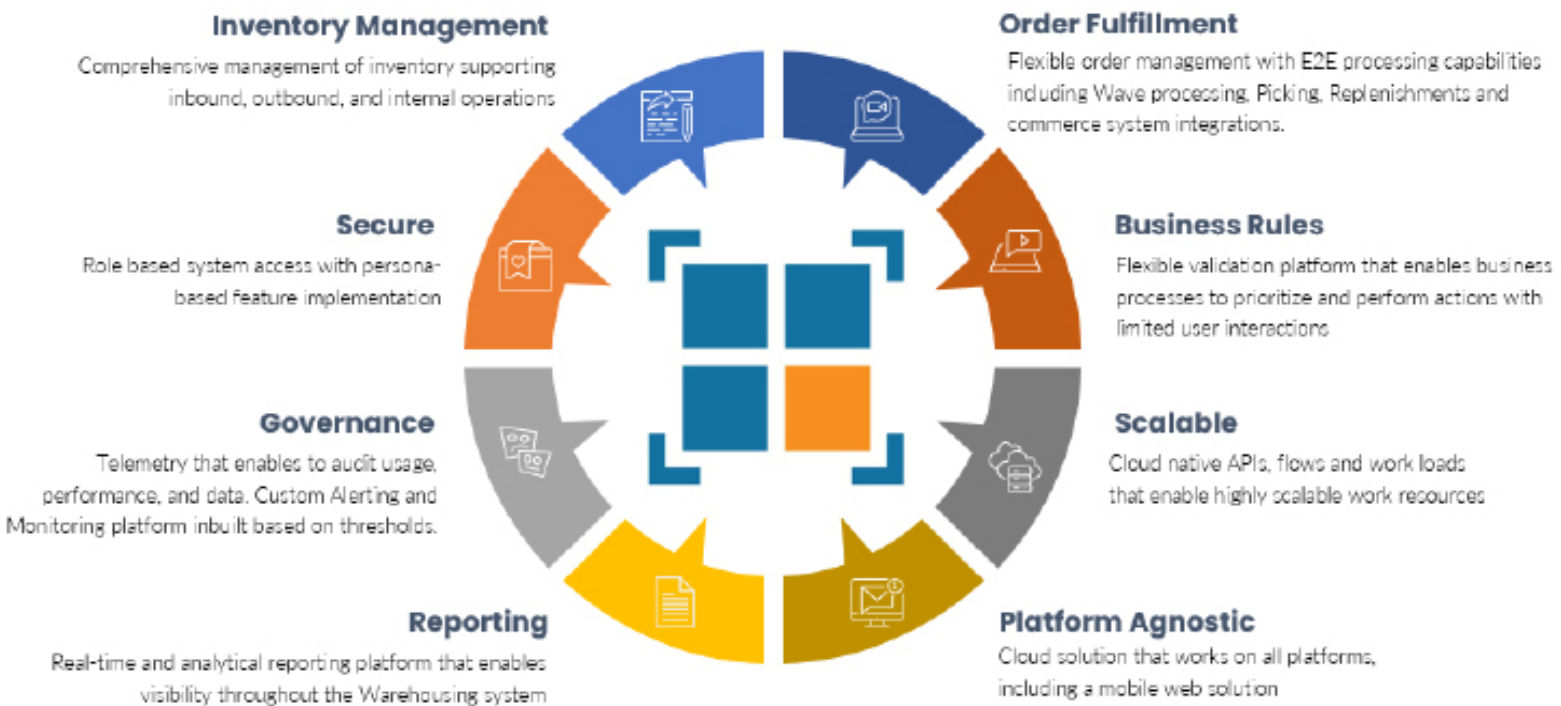

BRING DECADES OF EXPERTISE UNDER YOUR ROOF.

Datex Footprint Cloud WMS is developed on our proprietary Wavelength platform – where we’ve encoded decades of expertise, collaborating with operations, executive leaders, technology teams, and frontline employees across multiple markets and customers. The combined result is an unparalleled set of core WMS features, along with a native integration to leading supply chain solutions.

INTRODUCING WAVELENGTH THE NEW DATEX PROPRIETARY LOW CODE PLATFORM

For those who want to significantly tailor Footprint Cloud WMS in-house and develop their own WMS and logistics capabilities, Wavelength gives you the low-code building blocks to chart your own course and an open canvas to do it.

Wavelength and Footprint

Wavelength and Footprint

3

3PL BILLING

potentially record-breaking
profitability.

A man in a yellow safety vest is sitting at a desk in a warehouse, looking at a computer monitor. The monitor displays a software interface with various data fields and charts. In the background, there are tall metal shelving units filled with boxes and other warehouse equipment. Another person in a yellow safety vest is partially visible in the foreground on the right.

INTEGRATED WORKFLOW-BASED FLEXIBLE BILLING ENGINE

- Datex 3PL WMS ensures that your business can accommodate even the most unusual requirements of your clients and requests for any type of time frame or scenario
- Use the Datex 3PL WMS Billing Wizard to make sure that you set up billing exactly as needed-no worries or skipped steps
- Customize billing based on client needs and requirements
- Datex workflow enables you to automate billing, saving your company time and labor
- By incorporating workflow into 3PL WMS billing, Datex is able to eliminate errors and the time your team would spend finding and correcting them
- Use RF enabled mobile computing devices with Datex 3PL WMS to maximize the effectiveness of your investment. This will ensure that you can capture and bill for every value added service your company performs. No more spreadsheets, tallies or notes needed.

CAPTURE AND BILL FOR ALL THE VALUE-ADDED SERVICES YOU PROVIDE

Handles billing strategies such as:

- Recurring storage
- Initial split month storage
- Anniversary billing
- Inbound/outbound handling charges
- Activity based billing captured via RF handheld

3PL WMS ACTIVITY-BASED BILLING

Here is one way Datex Footprint® WMS increases billing accuracy:

- Scan and capture accessorial charges via RF handheld devices in real time
- RF device transmits charges to the 3PL WMS
- Invoices are posted automatically to the customer's general ledger
- The 3PL WMS automatically bills based on the respective contract
- Customers can have multiple custom billing for each inventory

A large warehouse interior with high ceilings and industrial lighting. In the foreground, a red forklift is partially visible. The background is filled with tall, blue metal shelving units (pallet racks) that are densely packed with cardboard boxes. The perspective is looking down a long aisle between the racks.

RECURRING STORAGE STRATEGY

Used to charge for storage of customer inventory within the warehouse and can be based on multiple types of billing objects including:

- License Plate
- License Plate Lot
- License Plate Material

License Plate Vendor Lot Recurring billing can be handled on the following basis:

- Daily
- Weekly
- Monthly
- Set Schedule
- Receiving Anniversary Schedule

INBOUND HANDLING

Can be billed based on multiple factors which may vary based on current operations or customer inventory being handled:

License Plate

- Net Weight
- Gross Weight
- Quantity

Unit by packaging type

Volume using required unit of measure

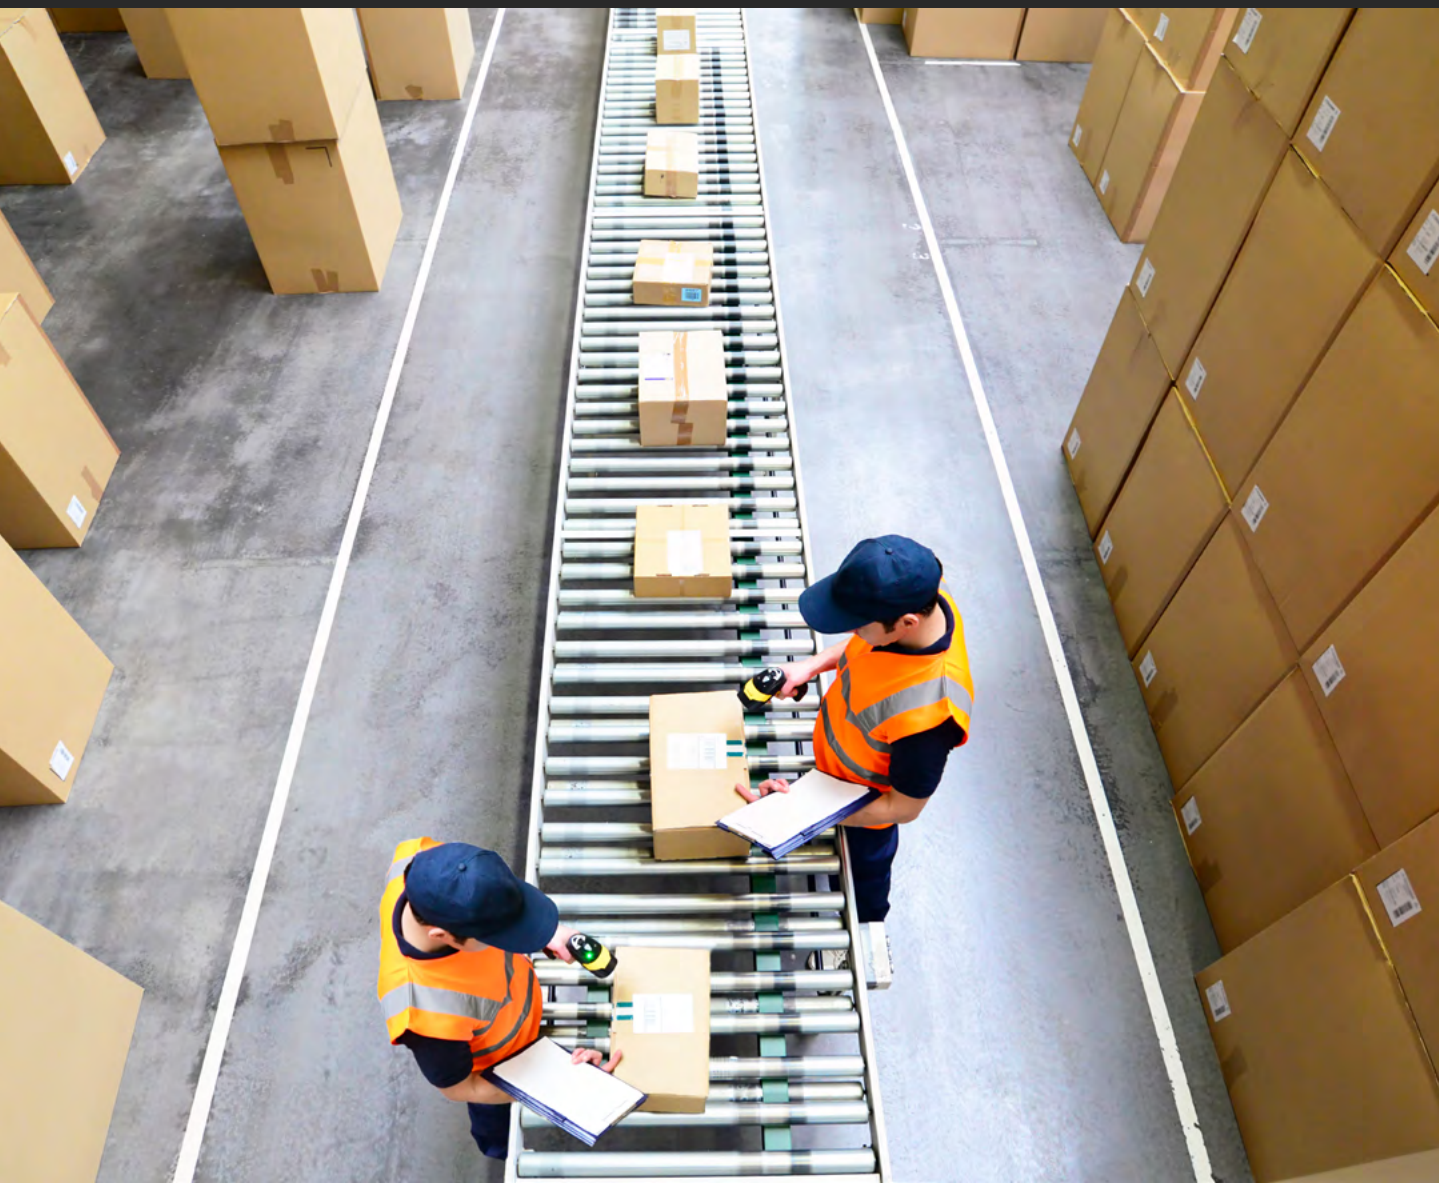

Weight

- Net Weight
- Gross Weight

INBOUND STORAGE STRATEGY

Storage charges can be billed based on the same criteria as handled inbound (LP, Unit, Volume, or Weight), but can be billed using specified billing periods.

- Can do full month and split month billing
- Additional storage billing strategies can be configured via workflow

ACCESSORIAL CHARGES STRATEGY

Using RF-enabled devices with our WMS ensures that billing will be updated in real time as the events are recorded via the desktop or mobile devices in the warehouse. One time accessorial charges can be manually added from the desktop or mobile devices as work is completed or can be added as extra charges if special circumstances dictate.

OUTBOUND HANDLING STRATEGY

Users set up rates for inventory being shipped from warehouse

- Billed by license plate
- Billed by weight (gross or net)
- Can enter separate contract line for each material group
- Comprehensive billing calculations for transactional and periodic events can be captured
- Can bill based on carrier service type

ACCESSORIAL CHARGE BILLING

Variable billing rates due to work type: separate contract lines for each accessorial type

Accessorial charge types can be added at any time

TRACK BILLING AND REVENUE BY CUSTOMER

Knowing the revenue and cost of each of your 3PL customers is essential to properly manage your operation. Datex Footprint® 3PL WMS includes a sophisticated reporting system that can provide you with this critical information.

A variety of standardized reports are provided in the Datex 3PL

WMS and customized reports can be created by “dragging and dropping” fields into the format of your choice. Reporting data is real time, enabling you to make better decisions using timely, accurate information.

**CUSTOMER-
FRIENDLY
SELF-SERVICE
WEB PORTAL**

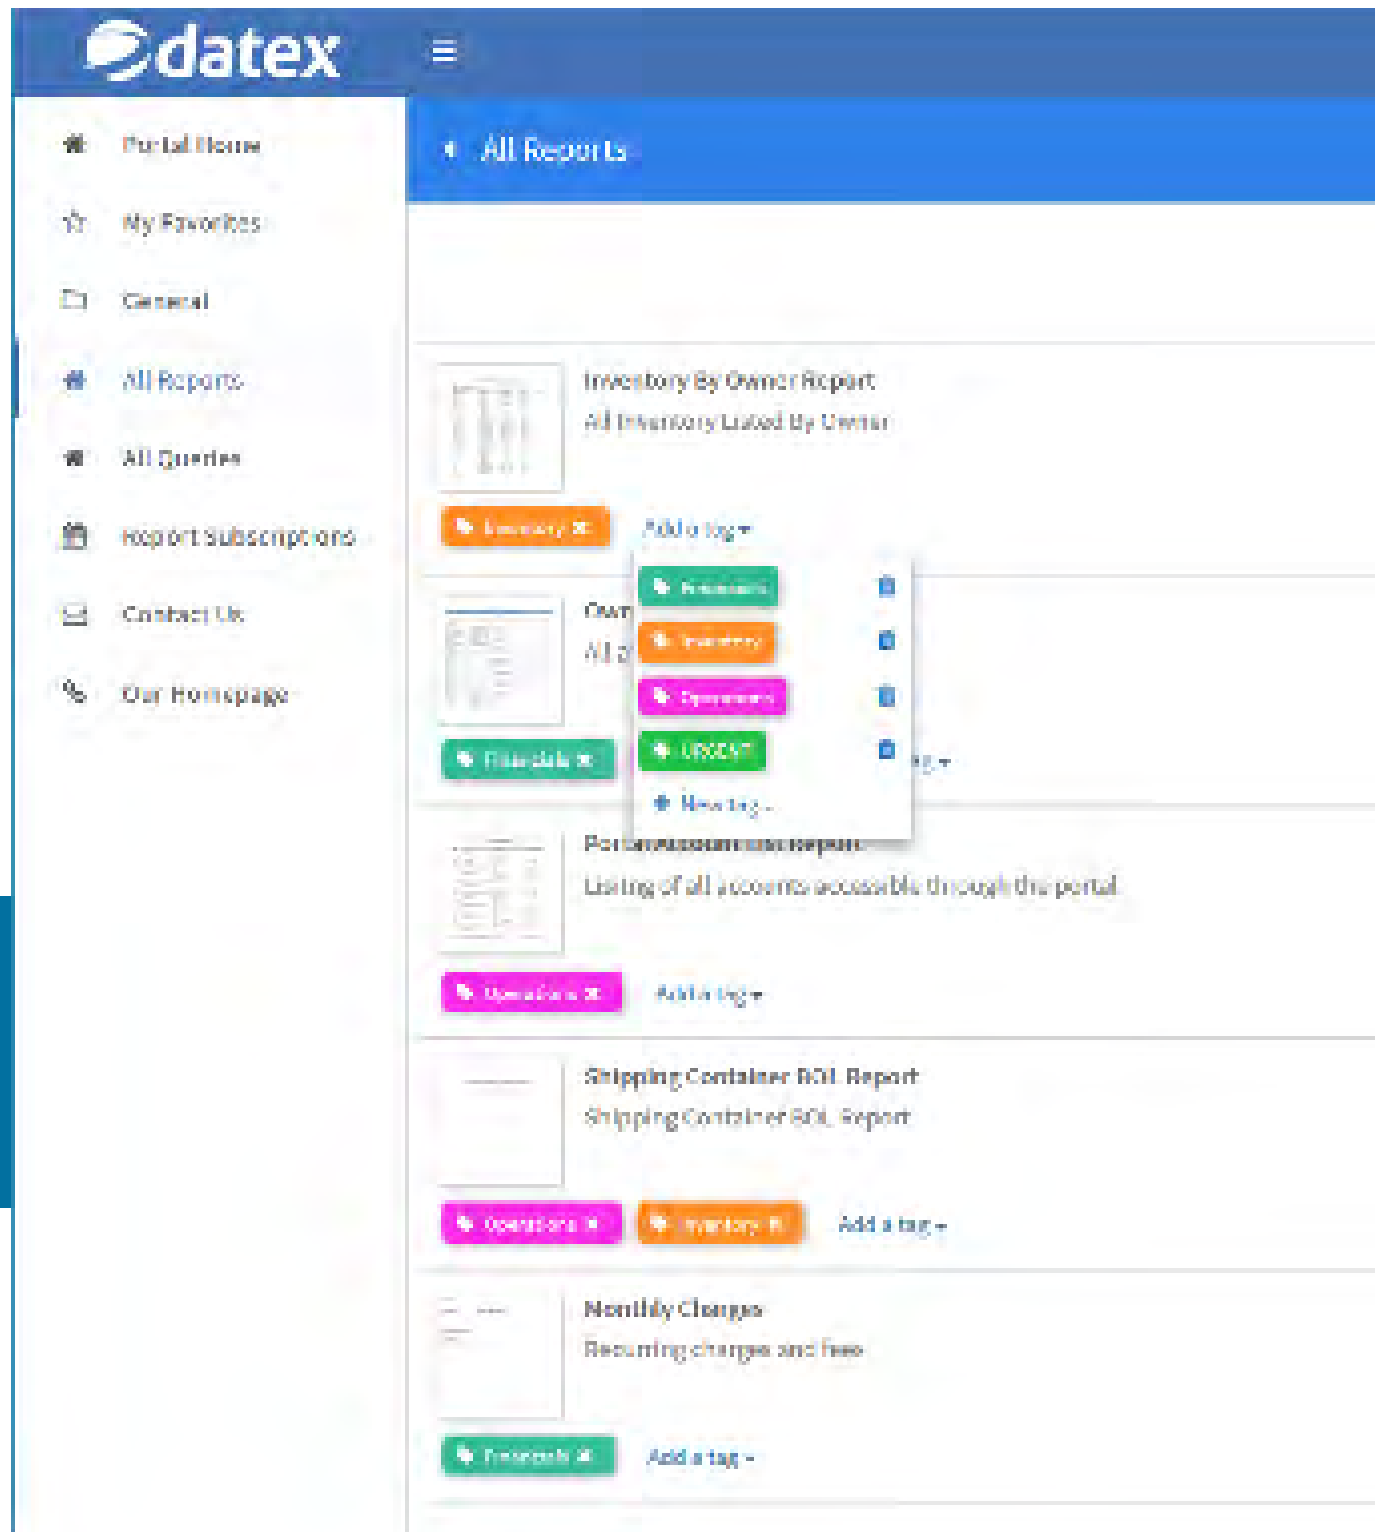

ENABLES SELF-SERVE OPERATIONS

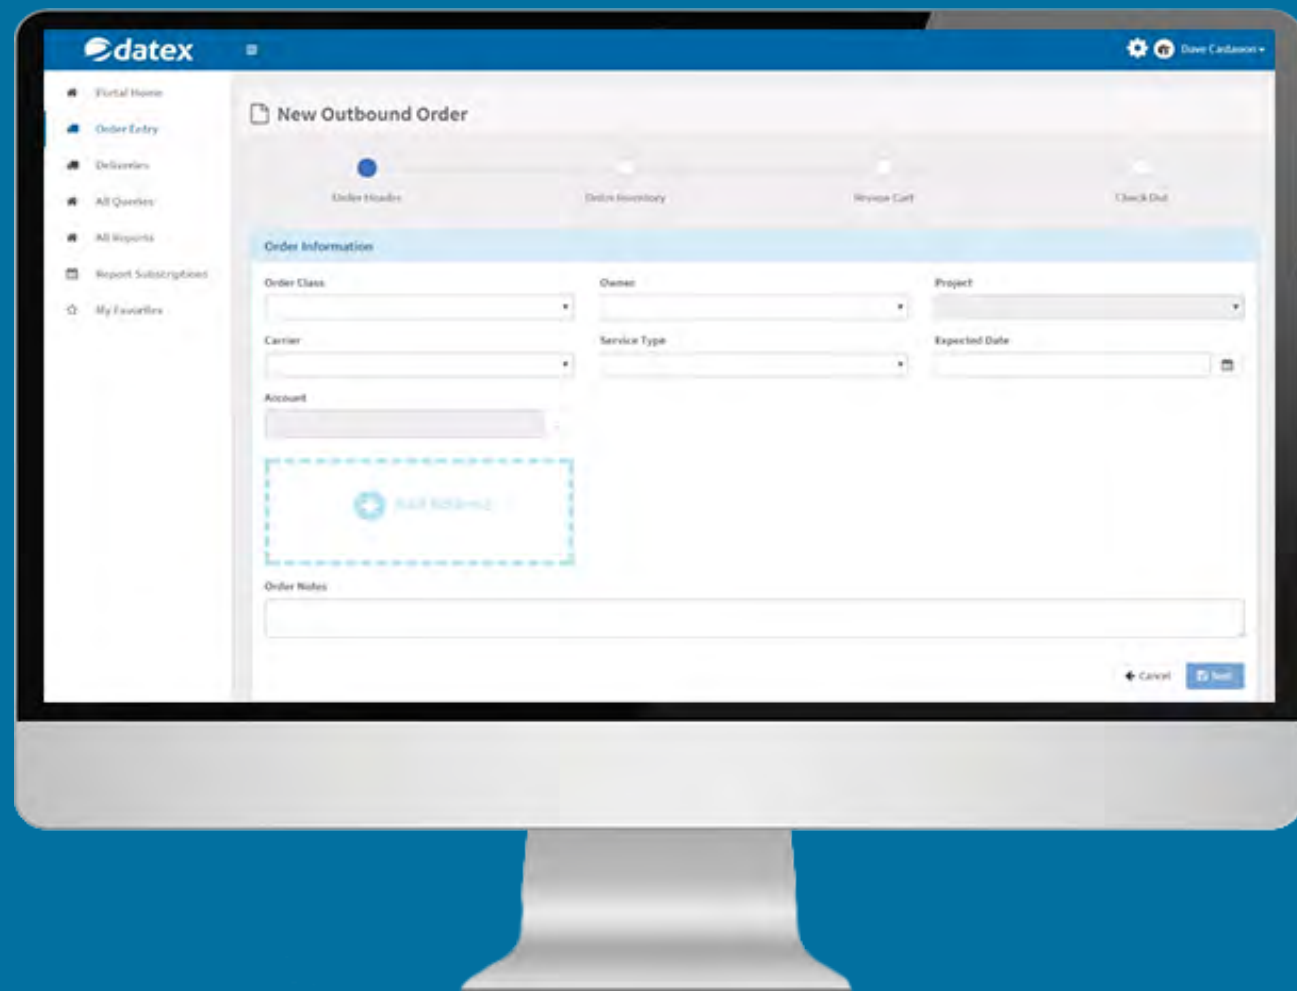

The new Datex ePortal is the gateway to real time information, control and resources for the customers of third party logistics providers. With new added flexibility and functionality, the new web portal uses HTML5 to create a seamless user experience and provide advanced access to critical information about your warehouse. Developed

to be intuitive and user friendly, the Datex Footprint® WMS ePortal incorporates easy-to-use navigation and a clean, crisp layout to make the portal simple to understand and use. Relying on real time data, the feature-rich web portal enables 3PL customers to act independently without intervention from a customer service representative.

Ensuring exceptional customer service is the hallmark of your business. Now your 3PL customers can have real-time information at their fingertips at any time of the day or night.

- Add customer logos easily
- Customizable menus, links, reports, screens and views
- Customize fields using customer's terminology

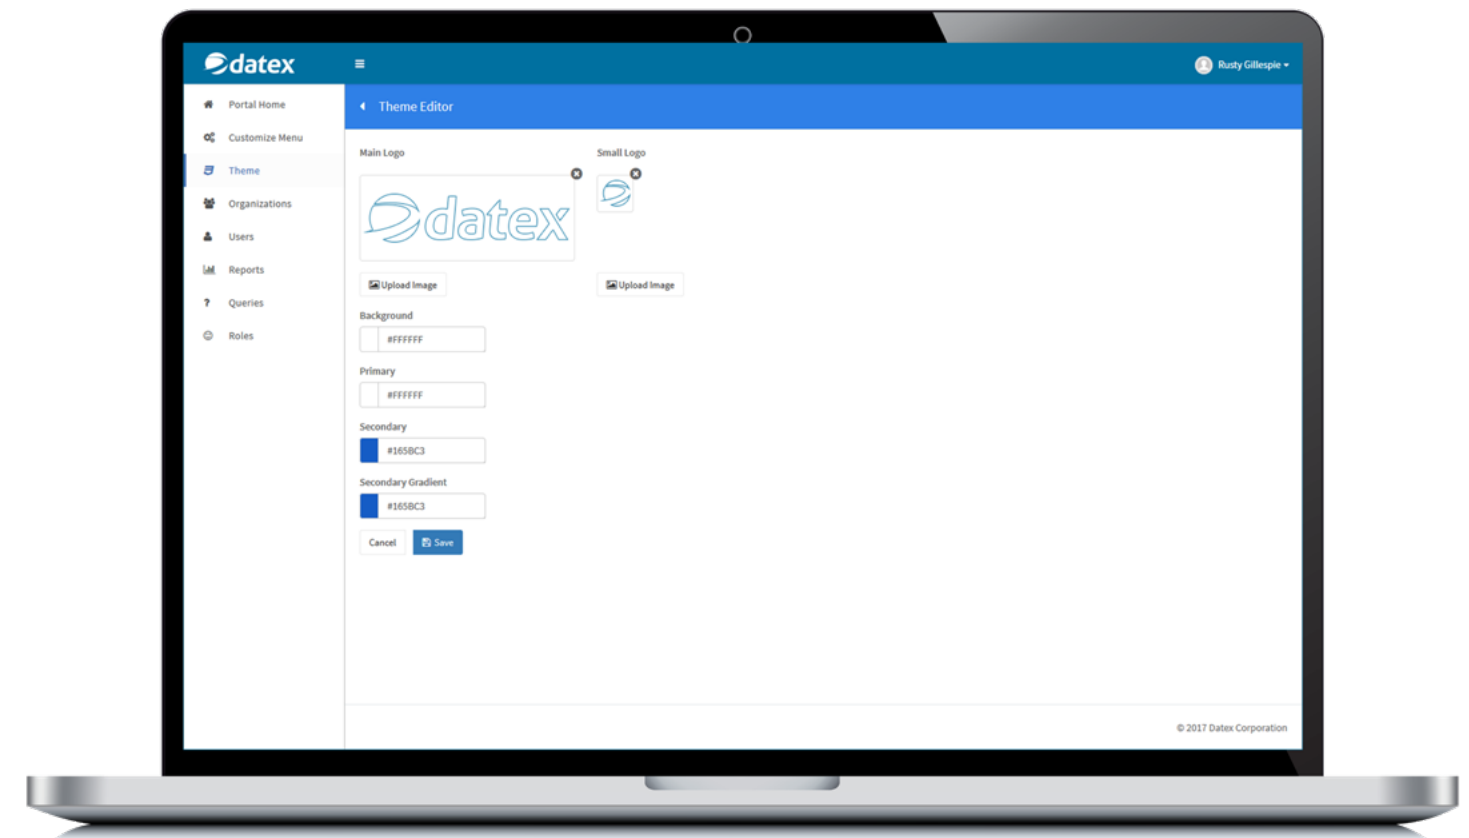

MANAGE INVENTORY AND WAREHOUSE OPERATIONS IN REAL TIME

- Input inbound or outbound orders
- View inventory, lots and license plates
- Assign shipments to a new or existing delivery
- View individual shipments or lists of open shipments
- Create or customize reports for better decision making

PUT YOUR 3PL CUSTOMERS IN THE DRIVER'S SEAT

- 3PL customers can act as web portal administrator
- Easy to administer, customize and manage
- User friendly
- Minimal training needed
- Empowers users to take real time action

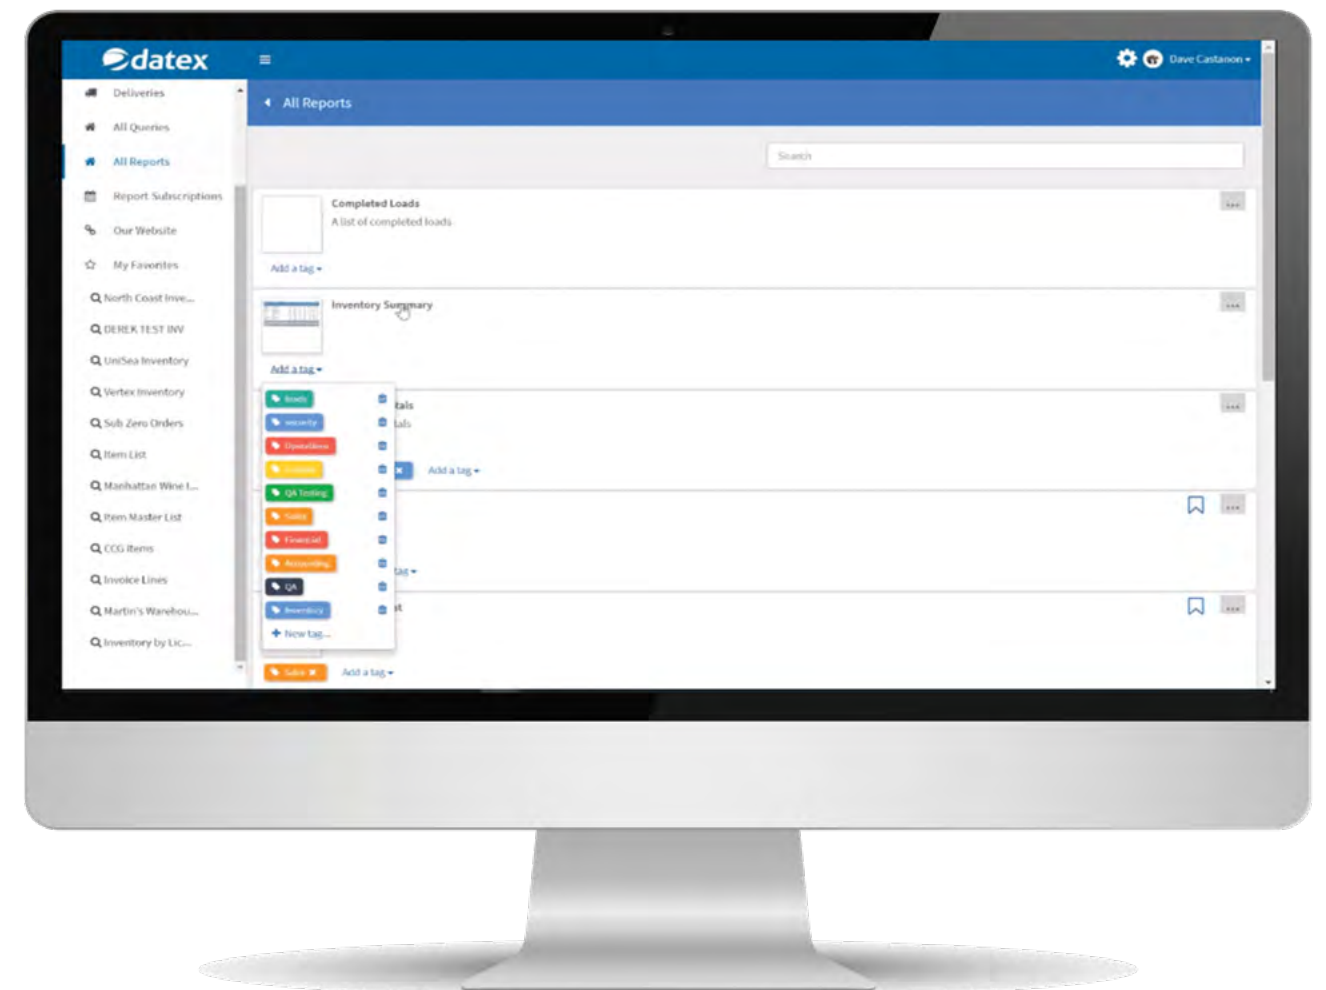

HTML5 ENSURES AN IMPROVED USER EXPERIENCE

- Simple, modern user interface (UI)
- Create, alter, customize reports to meet customer needs
- Wide variety of reporting formats
- Web portal is searchable
- Build customized reports, views and screens using queries
- Can apply rules and filters to simplify data
- Screen resizes automatically for mobile devices

WEB PORTAL HELPS SAVE TIME

- Automate report delivery
- Add bookmarks to save time
- Apply tags to simplify searches

5

3PL WAREHOUSE MANAGEMENT SYSTEM

devastatingly powerful.

3PL WMS BENEFITS

Developed for third party logistics providers

Captures and bills for any and all value added services

Speeds onboarding of new customers

Enables easy customization of billing

Facilitates faster development of customized reports

Innovative database architecture minimizes data loss and system "lock up"

Faster search speed and system performance

Enables you to compete and win new business

Workflow enables tailoring to customer specifications

Relies on less expensive SQL vs. Oracle database

Highly reliable software capable of handling high volume

Workflow automates operations for greater accuracy

Enables 24/7 visibility of customer data without staff

3PL WMS CAPABILITIES

Segregate inventory by ownership

Handle transfer of inventory ownership with comprehensive traceability

Provide accurate activity-based billing of value added services

Use the software for a wide variety of industries, operational conditions including cold storage and refrigerated warehouses. Datex Footprint® 3PL WMS is currently used across the globe.

Deploy the software quickly in tiers and blocks

Use a system in which database records do not lock up

Scale your business- ideal for fast growing, changing organizations

Store all file types in inventory records to facilitate timely accurate documentation of inventory, freight, warehouse and distribution needs, etc.

Handle the complex nature of third party logistics operations

Handle multiple types of inventory all within the same facility or enterprise

Enable 3PL clients to have access to real time, accurate data needed to manage their operation via a web portal. This helps to reduce customer service expense without sacrificing service levels or customer satisfaction.

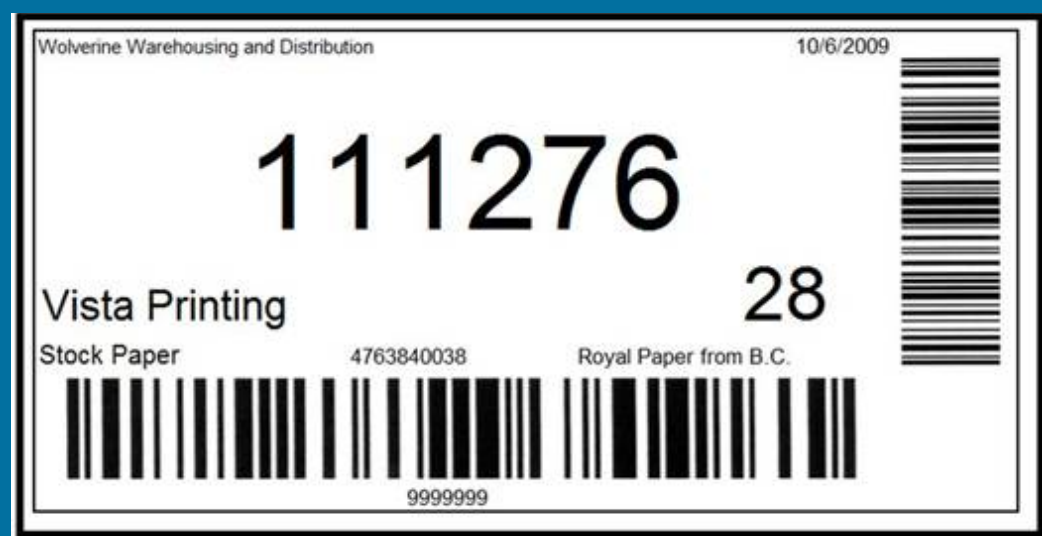

3PL WMS FEATURES

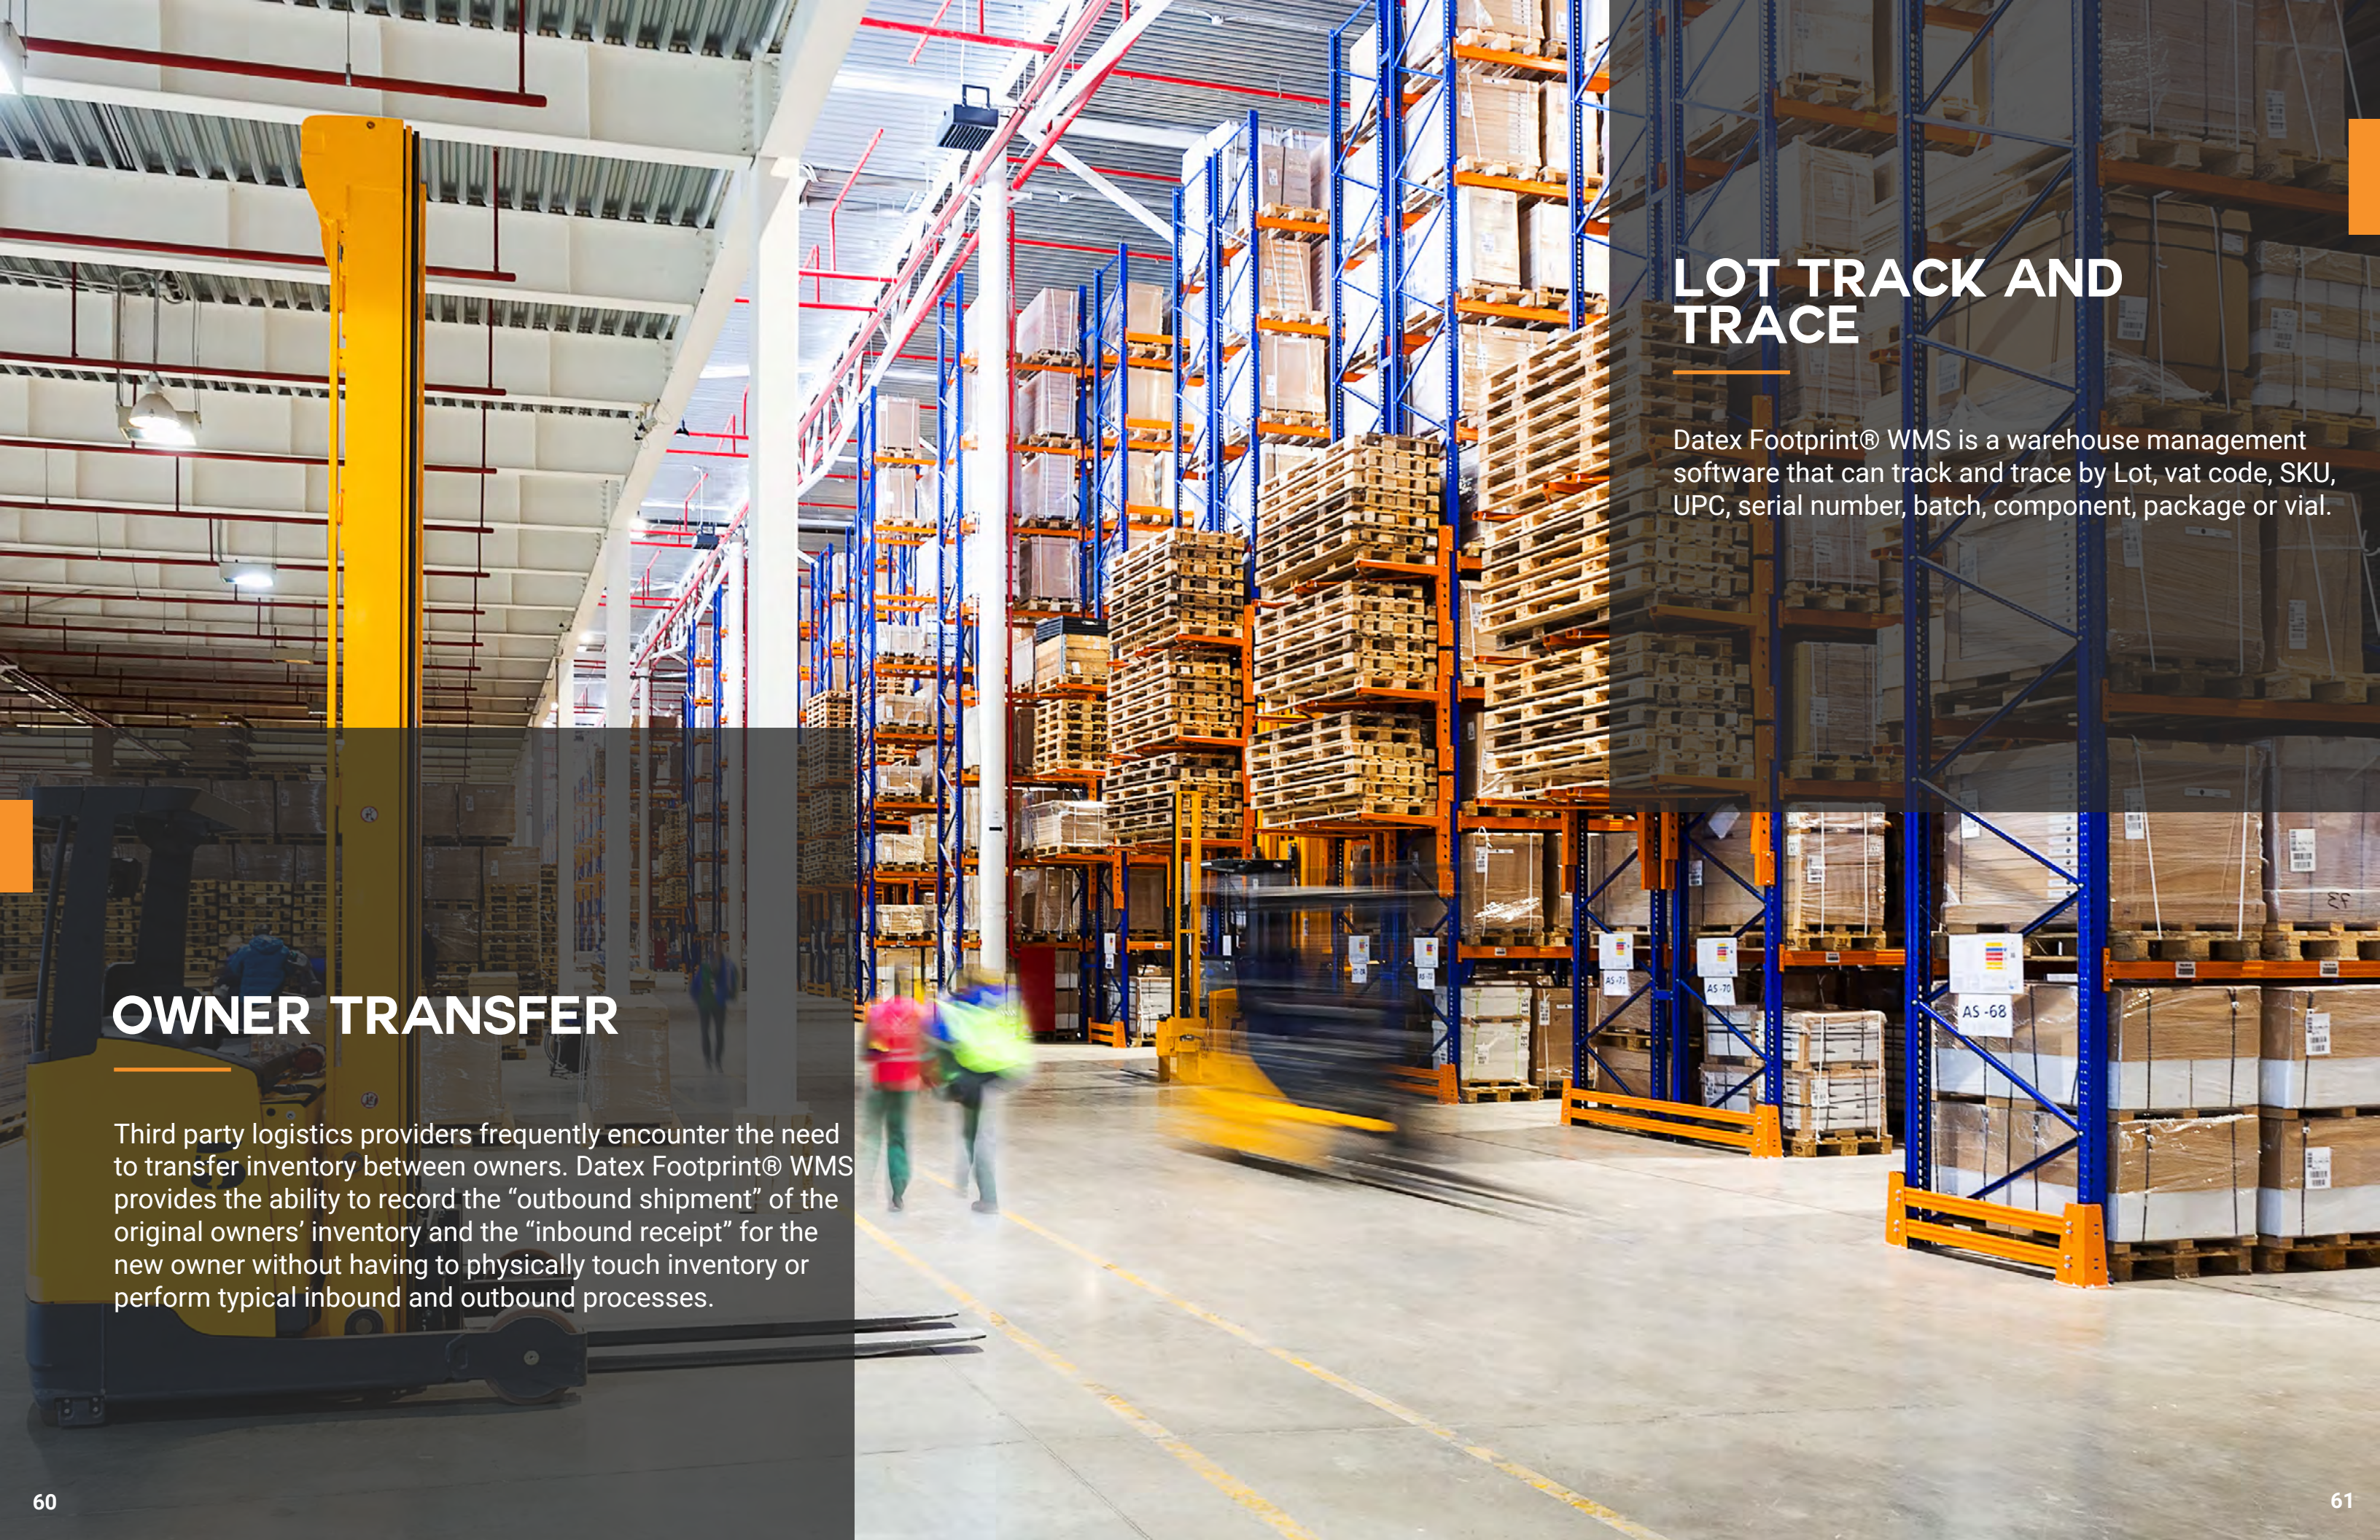

- Cross docking
- Inventory management
- Order consolidation
- Physical / cycle counting
- Accessorial Charge Capture
- Real-time Revenue Capture
- System-directed operations
- Pallet Tracking
- Pick and pack processing
- EDI Capable
- Alerts and Notifications
- Extensive reporting capabilities
- Temperature Capture
- Lot Control
- Catch weight
- Blind and Bulk Blind Receiving
- Quality control
- Automatic replenishment
- Wave building & management
- Light manufacturing / kitting
- FIFO, FEFO, FMFO, LIFO
- Real-time inbound/outbound processing
- Deferred Handling Revenue Tracking
- Auto-invoice generation

CUSTOMER SPECIFIC LABELS

Datex Footprint® WMS can provide customer specific labels on demand to meet a variety of customer requirements and needs.

- Catch weight
- Blind and Bulk Blind Receiving
- Quality control
- Automatic replenishment
- Wave building & management
- Light manufacturing / kitting
- FIFO, FEFO, FMFO, LIFO
- Real-time inbound/outbound processing
- Deferred Handling Revenue Tracking
- Auto-invoice generation

OWNER TRANSFER

Third party logistics providers frequently encounter the need to transfer inventory between owners. Datex Footprint® WMS provides the ability to record the “outbound shipment” of the original owners’ inventory and the “inbound receipt” for the new owner without having to physically touch inventory or perform typical inbound and outbound processes.

LOT TRACK AND TRACE

Datex Footprint® WMS is a warehouse management software that can track and trace by Lot, vat code, SKU, UPC, serial number, batch, component, package or vial.

BILL OF LADING

Datex Footprint® WMS includes the ability to create custom BOLs that are client specific.

CATCH/VARIABLE WEIGHT

The Datex Footprint® WMS solution is ideal for variable and bulk weight products as it readily handles gross and net and calculates tare weights automatically.

BARCODE PARSING

Datex Footprint® WMS includes a feature known as barcode parsing. The barcode parser provides users with the ability to use a single barcode to define product details such as: SKU, weight, license plate, serial number, lot, expiration dates, etc.

This allows receiving operations to perform a single scan and have all pertinent information populate automatically as opposed to filling them out one at a time. This simple ability ensures tremendous accuracy, labor and time savings and a smoother operation.

SCALE TICKETS

Incoming bulk product inventory can be weighed and placed into inventory in one master inventory Lot using the scale ticket feature. The scale tickets can then be used to calculate inventory product on hand. Automated scale tickets avoid manual calculations, handwriting errors and lost

documents and create a more seamless, accurate inventory process, increasing time and labor savings as well as accuracy. This automated function can help improve the quality of inventory management, invoicing and reporting, resulting in greater customer satisfaction.

The use of automated scale tickets is a new essential in the management of bulk inventory. The automated scale ticket function in Datex Footprint® WMS enables warehouse operators to more accurately and completely record information related to bulk weight inventory. The system includes the ability to add User Defined Fields (UDFs) and supports up to eight decimal places and can also record inventory weight and convert it to volume if material density is known.

The system Date and Time stamps each step of the process from the time that the container arrives to the point when it left the facility and all the temperature readings that were entered. This gives the facility a tracking mechanism in the event there were recalls on the product. A Carrier master file can also be established to ensure that carriers are easy to look up and data entry for carriers is consistent.

CROSSDOCK AND TRANS LOAD

The Trans load (crossdock) portion of the core WMS allows users to enter the inbound and outbound information all in one window. This allows the warehouse staff to synchronize the receiving and shipping process without having to wait for a data entry person to generate an outbound order after the product is

received. A Trans Load can be attached to a Load Container. This enables users to track, schedule and pre-assign doors with priorities to assist with work load schedules. Datex Footprint® WMS includes additional features such as dock door scheduling, production orders, work orders, pallet tracking and cartonization.

LOAD AND CONTAINER MANAGEMENT

The Load/Container Management feature tracks and manages import and export containerized loads in addition to over the road trucks. It tracks the Dates Available, Last

Onsite Date, Last Pier Date, In Yard Date and Temperature readings and allows users to prioritize certain loads by altering the priority level.

CYCLE COUNTS

Datex Footprint® WMS supports fully cycle counting capabilities. Users can select the criteria that they want to count (location, zone, aisle, specific material, material group, lot, and user defined tags

such as high velocity products. Once the filtering criteria have been setup the user can choose what information is blind and what information is shown to the user.

SERIAL NUMBER INQUIRY AND STATUSES

Datex Footprint® WMS supports full serialization if any inventory requires more granular tracking. The user can always pull up a complete history of the serial number to view receipt date, inspection tasks, etc. as well as manage the serial number status:

YARD MANAGEMENT

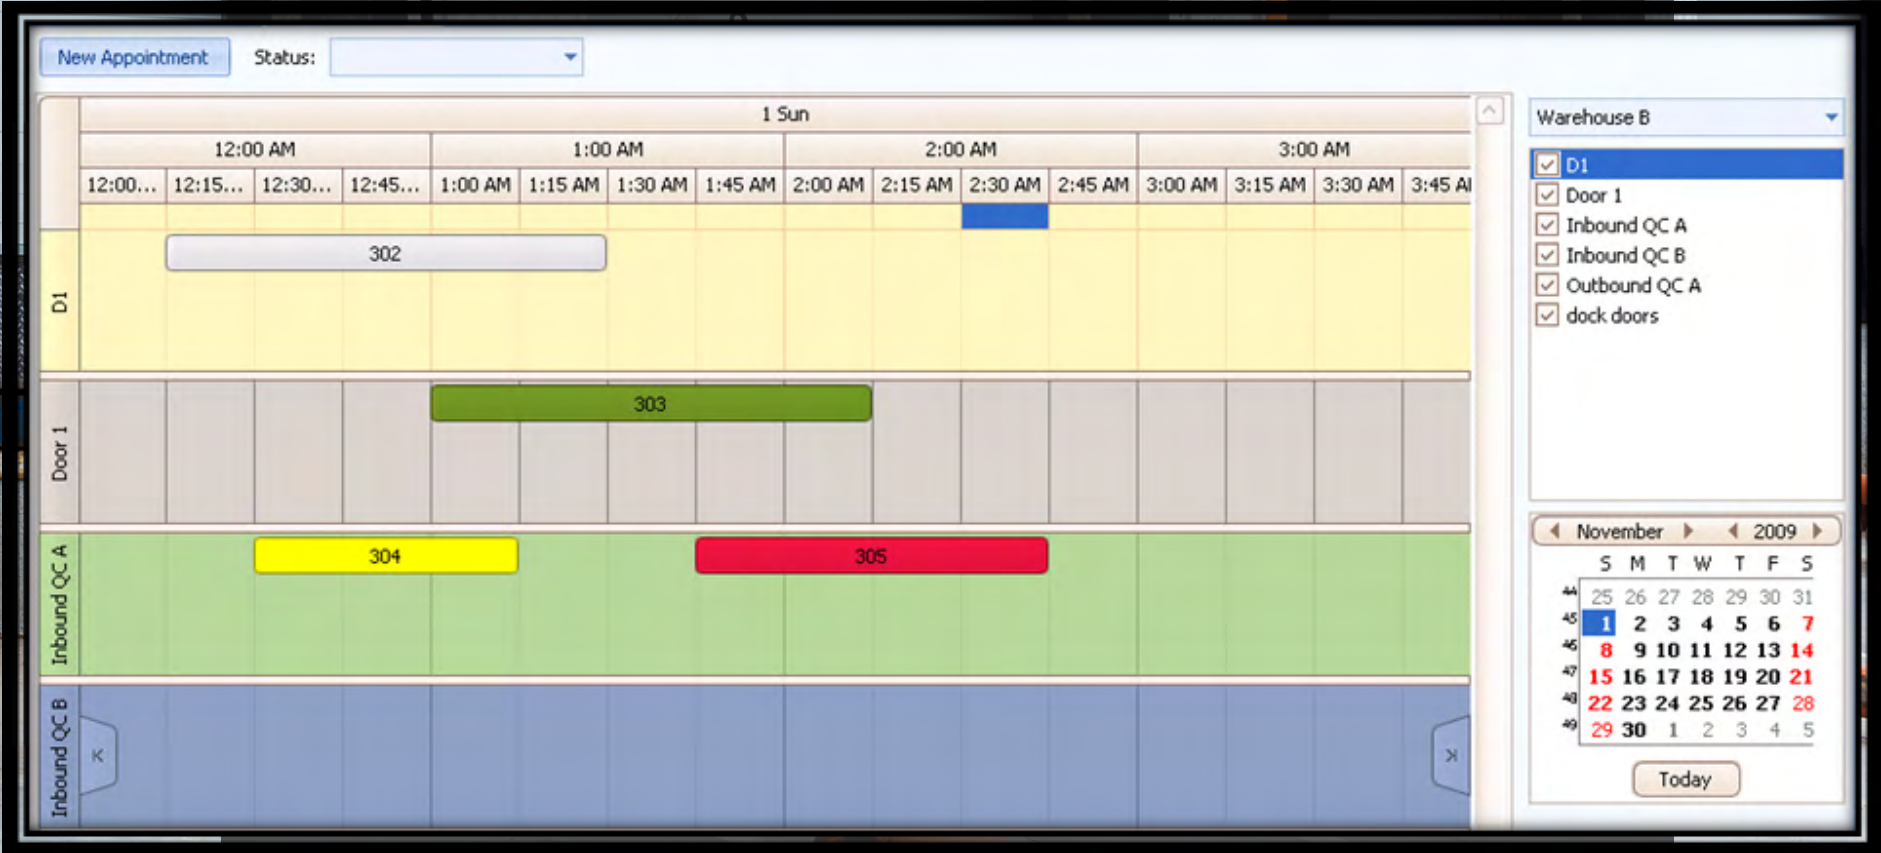

Load/Container Management & Tracking

- Date available, last onsite date, last pier date, in yard date
- Tracks temperature readings
- Enables users to prioritize loads
- Tracks & manages import and export containerized loads

DOCK DOOR SCHEDULER

Datex Footprint® WMS allows users to assign a time and door by container, shipment, or order and color codes the status for each step of the process. This view helps viewers to know if the load is Open, In-Process, In-Yard, Call-Out or in Completed Status. The Calendar can be viewed by Day, Week, Month, Inbound and/or Outbound Loads in order to assist in proper scheduling.

Many Datex clients have installed monitors in their waiting rooms so that drivers can view the progress and status of loading and unloading trucks, rail cars, etc. in real time using the Dock Door Scheduler feature of Datex Footprint® WMS. This makes waiting easier and less frustrating for all concerned with fewer interruptions for warehouse staff.

REPLENISHMENT

The Replenishment module facilitates the process of requesting that inventory be replenished from overstock bins to pick bins before products are actually required to fill sales orders. Warehouses are configured to use one of two types of replenishment: min/

max or days on hand. Min/max replenishment is based on a predefined minimum quantity of product that must be in pick bins. Days on hand replenishment is based on a defined minimum number of days that the product must be available in pick bins.

MASTER ORDERS

Datex Footprint® WMS has the capability of grouping multiple orders together under a Master Order. This is especially useful in the retail industry where an EDI blanket order can contain many store level orders. Grouping the orders together allows the

user to quickly change lines and have it affect multiple orders simultaneously (as opposed to opening each individual order). This allows the system to perform order consolidation based on rule sets.

WAVE PLANNING

Part of the physical process involved in preparing an outbound order for shipment is the ability to plan how the product will be picked from inventory. The system provides for creation of pick waves that can be for a specific order or shipment. Pick waves can also contain all of the orders for a particular account or

for a particular carrier. The organization can develop business processes that maximize the efficiency of the organization in the picking process by grouping multiple orders together so that all products from a particular location may be picked at the same time.

RF PICK

The core module directs the user to the appropriate pick locations and indicates the quantity to be picked from the location. The picking process reflects the power of the product allocation within the desktop. The pick sequence is determined by the configuration of the picking sequence, enabling the system to

be configured to reduce the amount of times a specific location is visited for picking or to route the user along the most efficient picking path. Through the picking process on the RF, the material, quantity, item and location can all be verified at the time the pick occurs, increasing accuracy.

PACKING

Packing can be performed on the desktop application or RF device. On the RF device simply, the user scans the box from which items are being removed.

Next scan the box into which items are being placed. From a desktop perspective, users simply drag and drop inventory to new boxes.

LOAD BUILDING

This module allows the user to confirm the loading and shipping process. The system will allow users to confirm the material that is being loaded into the truck, and will provide users with errors if an attempt is made to load license plates that have not been assigned to this particular shipment.

Datex Footprint® WMS will also let users confirm that loading is being done on the correct dock door. Once the loading process has been completed, it will reduce the inventory that just left the warehouse from the inventory total.

PALLET TRACKING

Companies involved in pallet exchange programs need to keep track of the number of pallets coming into the warehouse, as well as those leaving the warehouse. The system provides pallet

transactions for inbound and outbound shipments. Any type of pallet can be created providing some flexibility for companies needing to keep the inventory of multiple pallet types.

BUSINESS ALERTS

Datex Footprint® WMS includes a flexible system of business alerts, allowing each user to create customized alerts, or notifications about a wide array of conditions, status changes, etc. This system of alerts includes the ability to send electronic alerts to customers for both regular business events and exceptions.

Business alerts are user specific, meaning that each individual user can establish the notifications needed for his or her needs. This specificity helps increase productivity and focus on work related to each business role within the organization.

QUERY BUILDER

Saves time searching for vital information. Now users can have rapid access to vital data and create custom views of Datex Footprint® WMS. The WMS Query Builder makes it easy for software users to make complex inquiries of the warehouse management system using multiple and conditional fields so

that only the info needed will be returned.

What is a query? A Query is simply a request for information to the Datex WMS system. Once used, queries can be saved and used to create personalized views within the warehouse management system.

Queries can also be used within workflows to direct the system

Users use fields & filters to build WMS query

Save finished queries as “views” for fast future access

Query against data subsets such as:

Build for 3PL customer use

Orders, Lots, Materials, Carriers, Ship dates and more

Batch orders & other functions using query results

FULFILLMENT

FLEXIBLE WMS SOLUTIONS MEAN FASTER FULFILLMENT

Sophisticated Functionality Enables Best-in Class-Integration with:

Shipping Parcel Integration

Web Stores

Integrates with Material Handling Systems Including:

- Carousels
- Conveyors
- Sortation
- Pick- to-Light
- Pick-to-Voice
- Put-to-Light
- In Line Weigh Scales
- Zone divert modules
- Shuttle systems
- Manifest/document
- printers
- Vertical Lift Modules (VLM)
- Put-to-Wall
- Pick-from-Wall

Marketplaces

ERP and Financial Systems

FASTER, MORE ACCURATE E-COMMERCE ORDER FULFILLMENT

- Distributed order management
- Master orders
- Organize and sequence multiple orders into waves
- Channel specific order fulfillment workflow channels
- Kitting and assembly as well as assemble to order

ADVANCED RETURNS PROCESSING REVERSE LOGISTICS AND DISPOSITION WORKFLOW

- Disposition Inspections and Quality Assurance Management
- Return to Vendor rules
- Replacement rules
- Returns process management for a variety of channels via configurable workflows
- Material specific return configuration
- Customer credit rules

BRANDED UNIQUE CUSTOMER EXPERIENCE

- Brand specific packaging, labeling and gift wrap
- Personalized gift cards
- Branded package inserts
- Branded product documentation and instructions

ENABLES REAL TIME ACCESS TO INVENTORY INFORMATION

- Provides information visibility across the enterprise for ordering and decision making
 - Including delivery information
- Including inventory in retail locations, warehouses, distribution centers and third party warehouse locations

- Streamlines staging and other floor operations

A male warehouse worker with short dark hair and a beard, wearing a blue long-sleeved work shirt, is focused on a tablet computer. He is standing in a warehouse aisle, reaching up with his left hand towards a high shelf filled with boxes. The shelves are blue metal and stocked with various boxes, some of which are white with red and yellow patterns. The background is slightly blurred, showing more of the warehouse environment with high ceilings and industrial lighting.

RANGE OF PICKING STRATEGIES INCLUDING

- Advanced pick and pack functionality
- High Volume, small order
- Picking Methodology
- Piece picking
- Pick to cart
- Pick to conveyor
- Pick to carton
- Pick to wall
- Pick pack
- Batch Picking

Top industry partnerships. Take advantage of the long term partnerships Datex has established with industry leaders. Our experts keep up to date continually on industry solutions in order to advise you on the best technology for your business.

Break/Fix and Warranty and Extended Warranty Services on mobile devices and printers

MOBILE DEVICE MANAGEMENT

You need mobile devices in order to be able to always be in sync. Datex can monitor and troubleshoot your suite of mobile devices while in the field and can push software updates, manage security and much more - all while the devices are in the hands of your workforce, not in our office. We'll keep you going, as you need it, when you need it. With a customized program of mobile device management (MDM), IT solutions and services,

your organization will experience enhanced productivity, improved operational efficiency and minimized security risk. To ensure mobile device security, Datex can provide rapid deployment of security changes and access and handle immediate security lockdown of all or specific mobile devices. MDM data from mobile devices can be viewed via a web portal and reports can be generated.

Create a customized plan using all or some of these options to meet your budget and business needs
