**YOUR "YES"
WMS,**

IT'S A TREMENDOUS TIME TO BE A 3PL PROVIDER

In a stretch of years where many industries have faced slowdowns, 3PLs have enjoyed steady growth. Online retail is surging, and if you're a 3PL with the right capabilities and ample capacity, the future is yours.

But with growth comes complexity. Each new customer arrives with a full bag of customized wants, needs, and fulfillment preferences. Each new shopping season brings new labor challenges, compounded by a persistent labor shortage. As distribution becomes the cornerstone of the brand experience, 3PL providers are asked to shoulder bigger challenges and measured to higher standards.

If a 3PL provider cannot get its arms around operational complexity, the result will be workflow bottlenecks, tedious and time-consuming onboarding, cloudy financial visibility, and a host of other business limitations. It will not be able to respond fast enough and strategically enough to satisfy customer demands. And all that future growth will be unattainable.

The key to success is technology. A strategic investment in the right logistics technology is how the smartest warehouses are run, the toughest operational challenges are solved, the most profitable businesses are built, and the best brand experiences are delivered.

3PL providers who embrace technology innovation will rule the market. They will thrive where logistics requirements are the most complex and where their capabilities delivers the most value.

DOES YOUR BUSINESS HAVE ANY OF THESE CHALLENGES?

- Revenue Leakage/Insufficient Billing Capabilities
- Lack of Flexibility and Scalability
- Inability to Meet Industry Standards
- Lack of Visibility and Tracking
- Cost Management
- Risk Management
- Inventory Management
- Insufficient Support for Integrations and New Technologies
- Inability to handle multi-client single tenant deployments
- Inability to Meet Customer Expectations

YES, OUR WMS CAN PROVIDE YOU WITH

- Unmatched flexibility: Tailor processes, branding, reports, and more to match your needs and that of your customers.
- A streamlined, user-centric user interface for increased productivity
- Configurable, innovative technology that can help your business adapt, thrive, and grow

INBOUND OPERATIONS

Execution

- Shipment Scheduling
- Quality Audit
- Inbound Sortation
- Yard Management
- Cross Docking

- Putaway
- Cycle Count
- Serial # Tracking
- Lot Management
- Physical Count
- Warehouse Transfers
- Inventory Consolidation
- Work Orders
- Inventory Control

Billing

- In/Outbound Handling
- Volume/Weight Billing
- Accessorial Charges
- Owner Specific Billing
- Recurring Storage
- Work Order Billing
- Anniversary Storage
- Auto Invoice Generation

OUTBOUND OPERATIONS

Planning

- Wave Management
- Replenishment
- Constraint Fulfillment
- Dynamic Pick Locations
- Inventory Allocation
- Sortation Scheduling
- Order Consolidation
- Cartonization
- Scale Tickets

Fulfillment

- Pick/Pack
- Value Added Services
- Put to Store
- Multi-Channel Fulfillment
- Quality Audit
- Item Substitution
- Shipment Scheduling
- Pack and Hold

Datex Mobile Web

- Device Independent
- Easy to use, feature rich
- Browser-based for mobile users
- Quick connect
- Compatible with most devices
- Facilitates real time operations and visibility
- Self-adjusting portrait or landscape orientation
- Intuitive interface minimizes training time

Customer Portal

- Easy-to-use self-serve portal
- Enables 3PL customers to manage operations in real time
- Tailorable for any brand or customer
- 24/7 access to real time enterprise data and operations
- Robust secured access

YOUR “YES” WMS.

With Datex Footprint WMS, intricate tasks become straightforward, enabling you to say “yes” to more

ACCELERATES ONBOARDING AND TIME TO REVENUE:

Accelerates Onboarding and Time to Revenue: Our advanced capabilities enable faster onboarding of both customers and associates, which accelerates your revenue generation.

CAPTURE EVERY BILLABLE ACTIVITY:

Our flexible billing engine guarantees accurate billing for even the most unique circumstance and eliminates underbilling concerns, ensuring your money won’t get lost in the complexity of your operations.

SEAMLESSLY INTEGRATES WITH THIRD-PARTY SOLUTIONS:

Empower your team with low-code options for custom integrations and access our extensive library of pre-built and native integrations. Datex FootPrint Cloud ensures that you stay seamlessly connected to the digital world and opens up new markets and alternative fulfillment capabilities.

TRANSFORMS THE USER EXPERIENCE:

Experience a role-driven user interface that is perfectly tailored to every customer requirement, and easily updated every time a single requirement changes. You can boost productivity and throughput at every step, while minimizing errors and wasted time.

GAIN TOTAL VISIBILITY AND PROACTIVELY SOLVE PROBLEMS:

Gain a single source of truth with unified visibility across the entire transaction lifecycle that captures every aspect of your operations.

Our platform brings critical real-time information front and center and leverages predictive analytics, so you gain the power to preemptively solve problems and deliver top-notch customer service.

Say “YES” to More Flexibility, Reduction in Operating Cost, and Burden on Your IT Team

Introducing Datex Footprint® WMS, powered by Wavelength

Datex FootPrint WMS is a SaaS warehouse management system designed for visionary 3PL companies with complex customer demands and ambitious growth plans who see technology as a strategic differentiator to achieving exponential revenue growth and unparalleled efficiency.

- Premier SaaS application hosted on Microsoft Azure
- Fully integrated, composed, published and managed within our Wavelength platform
- Inability to Meet Industry Standards
- Intuitive drag-and-drop simplicity
- Zero downtime update capabilities
- Tenant isolation
- Empowers clients to swiftly deploy customized enterprise solutions to meet complex operational needs
- Hosted on Microsoft Azure environment
- Industry-based validations
- Native customized mobile solution
- Easily scalable for growth

Access easily from any location

Readily scalable

Vendor maintains the environment

Enhanced security

Vendor provides upgrades to hardware

Ready access to real time data

WAREHOUSE MANAGEMENT SYSTEM

devastatingly powerful.

WMS CAPABILITIES

WMS Picking & Outbound Processing

- Single order picking
- Batch picking
- Cluster picking
- Wave picking
- RF picking
- Bulk picking
- Pick by each
- Pick and pack processing
- FIFO, FEFO, FMFL, LIFO & more

WMS Warehouse Operations

- Temperature capture
- Pallet tracking
- Cycle counting
- Barcode parsing
- Warehouse transfer
- Owner/cloaked owner transfer
- Restrict inventory locations
- Create customer specific labels & BOL

☒

WMS Receiving

- Blind receiving
- Partial blind receiving
- EDI/ASN receiving
- Bulk receiving
- Automated receiving
- Weigh system scale ticket automated to WMS
- Catch/variable weight

Quality Assurance/Quality Control WMS

- Multiple simultaneous holds
- Inspections
- Taste testing
- Quarantines

☒

WMS Inventory Management

- Serialization/serial number control
- Automatic replenishment
- Track and trace

WMS Putaway

- System directed putaway
- User directed putaway

WMS Order Management

- Provides complete inventory & order details
- Manage fill rate and backorders
- Order consolidation
- Apparel matrix available

☒

Additional WMS Features

- EDI ready
- Customizable reporting
- Document storage in inventory records
- Comprehensive audit trail
- Signature capture
- Validation services available
- RF ready
- Workflow driven processes

LOT TRACK AND TRACE

Datex Footprint® WMS is a warehouse management software that can track and trace by Lot, vat code, SKU, UPC, serial number, batch, component, package or vial.

CATCH/VARIABLE WEIGHT

The Datex Footprint® WMS solution is ideal for variable and bulk weight products as it readily handles gross and net and calculates tare weights automatically.

BARCODE PARSING

Datex Footprint® WMS includes a feature known as barcode parsing. The barcode parser provides users with the ability to use a single barcode to define product details such as: SKU, weight, license plate, serial number, lot, expiration dates, etc. This allows receiving operations to perform a single scan and have all pertinent information populate automatically as opposed to filling them out one at a time. This simple ability ensures tremendous accuracy, labor and time savings and a smoother operation.

SCALE TICKETS

Incoming bulk product inventory can be weighed and placed into inventory in one master inventory Lot using the scale ticket feature. The scale tickets can then be used to calculate inventory product on hand. Automated scale tickets avoid manual calculations, handwriting errors and lost

documents and create a more seamless, accurate inventory process, increasing time and labor savings as well as accuracy. This automated function can help improve the quality of inventory management, invoicing and reporting, resulting in greater customer satisfaction.

The use of automated scale tickets is a new essential in the management of bulk inventory. The automated scale ticket function in Datex Footprint® WMS enables warehouse operators to more accurately and completely record information related to bulk

The system Date and Time stamps each step of the process from the time that the container arrives to the point when it left the facility and all the temperature readings that were entered. This gives the facility a tracking

weight inventory. The system includes the ability to add User Defined Fields (UDFs) and supports up to eight decimal places and can also record inventory weight and convert it to volume if material density is known.

mechanism in the event there were recalls on the product. A Carrier master file can also be established to ensure that carriers are easy to look up and data entry for carriers is consistent.

CROSSDOCK AND TRANS LOAD

The Trans load (crossdock) portion of the core WMS allows users to enter the inbound and outbound information all in one window. This allows the warehouse staff to synchronize the receiving and shipping process without having to wait for a data entry person to generate an outbound order after the product is

received. A Trans Load can be attached to a Load Container. This enables users to track, schedule and pre-assign doors with priorities to assist with work load schedules. Datex Footprint® WMS includes additional features such as dock door scheduling, production orders, work orders, pallet tracking and cartonization.

LOAD AND CONTAINER MANAGEMENT

The Load/Container Management feature tracks and manages import and export containerized loads in addition to over the road trucks. It tracks the Dates Available, Last

Onsite Date, Last Pier Date, In Yard Date and Temperature readings and allows users to prioritize certain loads by altering the priority level.

CYCLE COUNTS

Datex Footprint® WMS supports fully cycle counting capabilities. Users can select the criteria that they want to count (location, zone, aisle, specific material, material group, lot, and user defined tags

such as high velocity products. Once the filtering criteria have been setup the user can choose what information is blind and what information is shown to the user.

SERIAL NUMBER INQUIRY AND STATUSES

Datex Footprint® WMS supports full serialization if any inventory requires more granular tracking. The user can always pull up a

complete history of the serial number to view receipt date, inspection tasks, etc. as well as manage the serial number status:

Datex Footprint® WMS allows users to assign a time and door by container, shipment, or order and color codes the status for each step of the process. This view helps viewers to know if the load is Open, In-Process, In-Yard, Call-Out or in Completed Status. The Calendar can be viewed by Day, Week, Month, Inbound and/or Outbound Loads in order to assist in proper scheduling.

Many Datex clients have installed monitors in their waiting rooms so that drivers can view the progress and status of loading and unloading trucks, rail cars, etc. in real time using the Dock Door Scheduler feature of Datex Footprint® WMS. This makes waiting easier and less frustrating for all concerned with fewer interruptions for warehouse staff.

An aerial photograph of a large industrial yard, likely a port or warehouse. The yard is filled with numerous semi-trucks parked in rows, many of which are loaded with colorful shipping containers. The buildings have large, flat roofs. The scene is captured from a high angle, showing the layout of the yard and the density of the vehicles.

YARD MANAGEMENT

Load/Container Management & Tracking

- Date available, last onsite date, last pier date, in yard date
- Tracks temperature readings
- Enables users to prioritize loads
- Tracks & manages import and export containerized loads

Dock Door Appointment Scheduling

- Color coded appointment status
- Tracks from delivery to process completion

REPLENISHMENT

The Replenishment module facilitates the process of requesting that inventory be replenished from overstock bins to pick bins before products are actually required to fill sales orders. Warehouses are configured to use one of two types of replenishment: min/

max or days on hand. Min/max replenishment is based on a predefined minimum quantity of product that must be in pick bins. Days on hand replenishment is based on a defined minimum number of days that the product must be available in pick bins.

MASTER ORDERS

Datex Footprint® WMS has the capability of grouping multiple orders together under a Master Order. This is especially useful in the retail industry where an EDI blanket order can contain many store level orders. Grouping the orders together allows the

user to quickly change lines and have it affect multiple orders simultaneously (as opposed to opening each individual order). This allows the system to perform order consolidation based on rule sets.

WAVE PLANNING

Part of the physical process involved in preparing an outbound order for shipment is the ability to plan how the product will be picked from inventory. The system provides for creation of pick waves that can be for a specific order or shipment. Pick waves can also contain all of the orders

for a particular account or for a particular carrier. The organization can develop business processes that maximize the efficiency of the organization in the picking process by grouping multiple orders together so that all products from a particular location may be picked at the same time.

RF PICK

The core module directs the user to the appropriate pick locations and indicates the quantity to be picked from the location. The picking process reflects the power of the product allocation within the desktop. The pick sequence is determined by the configuration of the picking sequence, enabling the system to

be configured to reduce the amount of times a specific location is visited for picking or to route the user along the most efficient picking path. Through the picking process on the RF, the material, quantity, item and location can all be verified at the time the pick occurs, increasing accuracy.

PACKING

Packing can be performed on the desktop application or RF device. On the RF device simply, the user scans the box from which items are being removed.

Next scan the box into which items are being placed. From a desktop perspective, users simply drag and drop inventory to new boxes.

LOAD BUILDING

This module allows the user to confirm the loading and shipping process. The system will allow users to confirm the material that is being into the truck, and will provide users with errors if an attempt is made to load license plates that have not been assigned to this

particular shipment. Datex Footprint® WMS will also let users confirm that loading is being done on the correct dock door. Once the loading process has been completed, it will reduce the inventory that just left the warehouse from the inventory total.

PALLET TRACKING

Companies involved in pallet exchange programs need to keep track of the number of pallets coming into the warehouse, as well as those leaving the warehouse. The system provides pallet transactions

for inbound and outbound shipments. Any type of pallet can be created providing some flexibility for companies needing to keep the inventory of multiple pallet types.

BUSINESS ALERTS

Datex Footprint® WMS includes a flexible system of business alerts, allowing each user to create customized alerts, or notifications about a wide array of conditions, status changes, etc. This system of alerts includes the ability to send electronic alerts to customers for both regular business events and exceptions.

Business alerts are user specific, meaning that each individual user can establish the notifications needed for his or her needs. This specificity helps increase productivity and focus on work related to each business role within the organization.

QUERY BUILDER

Saves time searching for vital information. Now users can have rapid access to vital data and create custom views of Datex Footprint® WMS. The WMS Query Builder makes it easy for software users to make complex inquiries of the warehouse management system using multiple and conditional fields so

that only the info needed will be returned.

What is a query? A Query is simply a request for information to the Datex WMS system. Once used, queries can be saved and used to create personalized views within the warehouse management system.

Queries can also be used within workflows to direct the system

Users use fields & filters to build WMS query

Query against data subsets such as:

Orders, Lots, Materials, Carriers, Ship dates and more

Save finished queries as “views” for fast future access

Batch orders & other functions using query results

**DATEX
SOFTWARE**

The latest technology at the lowest prices

Additional Manufacturer Discounts. Datex passes along additional manufacturer discounts to ensure that you always get the lowest price on hardware. As a premium industry partner, Datex is often able to get special discounts that can be passed along to your company.

WHY SELECT DATEX AS YOUR HARDWARE SOLUTIONS PROVIDER,

Helps ensure streamlined Datex software implementations

Free configuration with purchase of hardware from Datex.

Benefit from our experience. Our team has specialized expertise in selecting, configuring and troubleshooting mobile computing and other hardware solutions to work with Datex software.

Save time, money and frustration. With only one vendor to call, there

is no “blame game” or “finger pointing”. Datex experts handle all your needs to help keep your project on schedule and executed to the highest standards.

Optimized wireless coverage. Datex designs customized site surveys for optimal wireless coverage.

ZEBRA

Solution Partner

KEEP YOUR BUSINESS UP AND RUNNING USING THE LATEST TECHNOLOGY

Buyback program. Take advantage of our device buyback program to help ensure that you always get the top dollar for used equipment when upgrading to the latest technology for your business.

Reliable experts help you manage your technology

Optimal, affordable solutions. In business since 1978, Datex provides technology experts that can help find the best, cost effective solutions for your operation.

Latest technology. Technology experts help ensure that you are advised of new technology advances and services that can benefit your business.

Highly experienced. The Datex team includes experts with more than 15 years of service and experience in providing mobility hardware solutions to a variety of industries.

Break/Fix and Warranty and Extended Warranty Services on mobile devices and printers

Top industry partnerships. Take advantage of the long term partnerships Datex has established with industry leaders. Our experts keep up to date continually on industry solutions in order to advise you on the best technology for your business.

MOBILE DEVICE MANAGEMENT

You need mobile devices in order to be able to always be in sync. Datex can monitor and troubleshoot your suite of mobile devices while in the field and can push software updates, manage security and much more - all while the devices are in the hands of your workforce, not in our office. We'll keep you going, as you need it, when you need it. With a customized program of mobile device management (MDM), IT solutions and services,

your organization will experience enhanced productivity, improved operational efficiency and minimized security risk. To ensure mobile device security, Datex can provide rapid deployment of security changes and access and handle immediate security lockdown of all or specific mobile devices. MDM data from mobile devices can be viewed via a web portal and reports can be generated.

Create a customized plan using all or some of these options to meet your budget and business needs

Rapid software deployment and provisioning

Device configuration

Device troubleshooting and field support
